

Environmental Policy

Metrocorp Technologies recognise the principles of ecological sustainable development and that responsible environmental management is essential to the future prosperity of the company as well as the communities in which we operate.

The company is committed to meeting all environmental legislative, regulatory and compliance obligations. We will ensure that we meet our obligations to prevent pollution and the reduction of other significant environmental impacts in our day to day activities at all places of work. We also commit to meeting any project specific environmental management requirements agreed to with our clients.

The company is committed to maintaining an Environmental Management System that meets the requirements of AS/NZS ISO 14001:2004 and also to maintaining our third party certification status.

Senior management will establish measureable objectives and targets and review them at regular intervals to ensure they remain relevant to the strategic path of the business as well as serving the communities in which we operate. We will measure our performance in regard to these objectives to allow us to continually improve our environmental management systems and enhance our environmental performance.

It is our goal to have minimal impact on the natural and built environments in which we operate. In addition, our goal is to have zero notifiable environmental incidents on all work sites and continually increase awareness and educate workers in regards to the following environmental aspects:

- Air quality – dust and odour
- Noise and vibration management
- Water quality management
- Soil and contamination
- Waste management
- Chemical storage and management
- Flora and Fauna management
- Heritage preservation and protection

It is the responsibility of all our staff to ensure that this policy is adopted across our operations.

Signed:
